Customize Jackson ObjectMapper

```java
public class CustomJacksonApplication implements Jackson2ObjectMapperBuilderCustomizer {

    @Override
    public void customize(Jackson2ObjectMapperBuilder jacksonObjectMapperBuilder) {
        jacksonObjectMapperBuilder.indentOutput(true);
        jacksonObjectMapperBuilder.serializationInclusion(JsonInclude.Include.NON_NULL);
    }
}
```

Customize Serialize/Deserialize

```java
public class Message {
    private String message;
    @JsonFormat(pattern = "dd::MM::yyyy")
    private LocalDate date;
```

```java
public class Message {
    private String message;
    @JsonSerialize(using = LocalDateSerializer.class)
    @JsonDeserialize(using = LocalDateDeserializer.class)
    private LocalDate date;
```

Default Serializer/Deserializer

```java
public static final DateTimeFormatter FORMATTER = ofPattern("dd::MM::yyyy");

@Bean
@Primary
public ObjectMapper serializingObjectMapper() {
    ObjectMapper objectMapper = new ObjectMapper();
    JavaTimeModule javaTimeModule = new JavaTimeModule();
    javaTimeModule.addSerializer(LocalDate.class, new LocalDateSerializer());
    javaTimeModule.addDeserializer(LocalDate.class, new LocalDateDeserializer()
    objectMapper.registerModule(javaTimeModule);
    return objectMapper;
}
```
